

## PATENT

**B. AMENDMENTS TO THE CLAIMS**

1. (Currently amended) A method of providing secondary functions from a menu item graphical control, said method comprising:  
including a plurality of graphical components with the menu item graphical control, each of the graphical components corresponding to a different programmed function, wherein the menu item graphical control includes a default area in addition to the plurality of graphical components;  
displaying the menu item graphical control with the included graphical components and the default area,  
wherein each of the graphical components are displayed in a position horizontal to the default area;  
receiving a selection from a user corresponding to the menu item graphical control ~~one of the graphical components;~~ and  
invoking a default function in response to the selection corresponding to the default area of the menu item graphical control; and  
in response to the selection corresponding to one of the graphical components, invoking the programmed function corresponding the selected graphical component.
2. (Original) The method as described in claim 1 further comprising:  
displaying a sub-menu of selectable programmed functions in response to the user selecting a sub-menu graphical component.

## PATENT

3. (Original) The method as described in claim 1 wherein at least one of the graphical components includes a graphical icon that is displayed on the menu item graphical control.
4. (Original) The method as described in claim 1 further comprising:  
configuring the plurality of programmed functions using a configuration tool;  
modifying the menu item graphical control to include the graphical components corresponding to the configured programmed functions; and  
saving the configured plurality of programmed functions and the modified menu item graphical control.
5. (Original) The method as described in claim 1 further comprising:  
configuring one or more secondary functions to include in a sub-menu;  
modifying the menu item graphical control to include a sub-menu graphical component corresponding to the sub-menu;  
saving the secondary functions and the modified menu item.
6. (Cancelled)
7. (Original) The method as described in claim 1 wherein the programmed functions include one or more application programs.
8. (Original) The method as described in claim 1 wherein the programmed functions include one or more application functions corresponding to an application program and

## PATENT

wherein the menu item graphical control corresponds to the application program.

9. (Currently amended) An information handling system comprising:
- one or more processors;
  - a memory accessible by the processors;
  - a nonvolatile storage area accessible by the processors;
  - a display screen accessible by the processors;
  - an input device capable of a receiving input from a user corresponding to data displayed on the display screen;
  - and
  - a secondary function menu item tool to include secondary functions with a menu item graphical control, the secondary function menu item tool including:
    - display logic for displaying a plurality of graphical components with the menu item graphical control on the display device, each of the graphical components corresponding to a different programmed function, wherein the menu item graphical control includes a default area in addition to the plurality of graphical components;
    - menu item logic for displaying the menu item graphical control with the included graphical components and the default area, wherein each of the graphical components are displayed in a position horizontal to the default area;
    - input processing logic for receiving a selection from a user corresponding to the menu item graphical control ~~one of the graphical components;~~ and

## PATENT

task scheduling logic for invoking a default function  
in response to the selection corresponding to the  
default area of the menu item graphical control;  
and

in response to the selection corresponding to one of  
the graphical components, task scheduling logic  
for invoking the programmed function  
corresponding the selected graphical component.

10. (Original) The information handling system as described in claim 9 further comprising:  
display logic for displaying a sub-menu of selectable programmed functions in response to the user selecting a sub-menu graphical component.
11. (Original) The information handling system as described in claim 9 wherein at least one of the graphical components includes a graphical icon that is displayed on the menu item graphical control.
12. (Original) The information handling system as described in claim 9 further comprising:  
configuration logic for configuring the plurality of programmed functions using a configuration tool;  
graphic modification logic for modifying the menu item graphical control to include the graphical components corresponding to the configured programmed functions;  
and  
storage handling logic for saving the configured plurality of programmed functions and the modified menu item graphical control to the nonvolatile storage area.

## PATENT

13. (Currently amended) A computer program product stored on a computer operable medium for providing secondary functions from a menu item graphical control, said computer program product comprising:

means for including a plurality of graphical components with the menu item graphical control, each of the graphical components corresponding to a different programmed function, wherein the menu item graphical control includes a default area in addition to the plurality of graphical components;

means for displaying the menu item graphical control with the included graphical components and the default area, wherein each of the graphical components are displayed in a position horizontal to the default area;

means for receiving a selection from a user corresponding to the menu item graphical control ~~one of the graphical components;~~ and

means for invoking a default function in response to the selection corresponding to the default area of the menu item graphical control; and

in response to the selection corresponding to one of the graphical components, means for invoking the programmed function corresponding the selected graphical component.

14. (Original) The computer program product as described in claim 13 further comprising:

means for displaying a sub-menu of selectable programmed functions in response to the user selecting a sub-menu graphical component.

## PATENT

15. (Original) The computer program product as described in claim 13 wherein at least one of the graphical components includes a graphical icon that is displayed on the menu item graphical control.
16. (Original) The computer program product as described in claim 13 further comprising:  
means for configuring the plurality of programmed functions using a configuration tool;  
(Original) means for modifying the menu item graphical control to include the graphical components corresponding to the configured programmed functions;  
and  
means for saving the configured plurality of programmed functions and the modified menu item graphical control.
17. (Original) The computer program product as described in claim 13 further comprising:  
means for configuring a plurality of secondary functions to include in a sub-menu;  
means for modifying the menu item graphical control to include a sub-menu graphical component corresponding to the sub-menu;  
means for saving the plurality of secondary functions and the modified menu item.
18. (Cancelled)
19. (Original) The computer program product as described in claim 13 wherein the programmed functions include one or more application programs.

## PATENT

20. (Original) The computer program product as described in claim 13 wherein the programmed functions include one or more application functions corresponding to an application program and wherein the menu item graphical control corresponds to the application program
21. (Original) A method of providing secondary functions from a menu item graphical control, said method comprising: configuring one or more secondary functions to include in a sub-menu;  
modifying the menu item graphical control to include a sub-menu graphical component corresponding to the sub-menu, wherein the menu item graphical control further includes one or more graphical components corresponding to one or more programmed functions; and displaying the sub-menu in response to a user selecting the sub-menu graphical component.
22. (Original) A method of providing secondary functions from a menu item graphical control, said method comprising: configuring a plurality of programmed functions using a configuration tool;  
identifying a plurality of graphical components for each of the programmed functions;  
modifying the menu item graphical control to include the graphical components corresponding to the configured programmed functions;  
displaying the menu item graphical control with the included graphical components;  
receiving a selection from a user corresponding to one of the graphical components; and

## PATENT

invoking the programmed function corresponding the selected graphical component.

23. (Original) An information handling system comprising:
- one or more processors;
  - a memory accessible by the processors;
  - a nonvolatile storage area accessible by the processors;
  - a display screen accessible by the processors;
  - an input device capable of a receiving input from a user corresponding to data displayed on the display screen;
  - and
  - a secondary function menu item tool to include secondary functions with a menu item graphical control, the secondary function menu item tool including:
    - means for configuring one or more secondary functions to include in a sub-menu;
    - means for modifying the menu item graphical control to include a sub-menu graphical component corresponding to the sub-menu, wherein the menu item graphical control further includes one or more graphical components corresponding to one or more programmed functions; and
    - means for displaying the sub-menu in response to a user selecting the sub-menu graphical component.
24. (Original) An information handling system comprising:
- one or more processors;
  - a memory accessible by the processors;
  - a nonvolatile storage area accessible by the processors;
  - a display screen accessible by the processors;

## PATENT

an input device capable of a receiving input from a user  
corresponding to data displayed on the display screen;  
and

a secondary function menu item tool to include secondary  
functions with a menu item graphical control, the  
secondary function menu item tool including:  
means for configuring a plurality of programmed  
functions using a configuration tool;  
means for identifying a plurality of graphical  
components for each of the programmed functions;  
means for modifying the menu item graphical control to  
include the graphical components corresponding to  
the configured programmed functions;  
means for displaying the menu item graphical control  
with the included graphical components;  
means for receiving a selection from a user  
corresponding to one of the graphical components;  
and  
means for invoking the programmed function  
corresponding the selected graphical component.

25. (Original) A computer program product stored on a  
computer operable medium for providing secondary functions  
from a menu item graphical control, said computer program  
product comprising:  
means for configuring one or more secondary functions to  
include in a sub-menu;  
means for modifying the menu item graphical control to  
include a sub-menu graphical component corresponding  
to the sub-menu, wherein the menu item graphical  
control further includes one or more graphical

## PATENT

components corresponding to one or more programmed functions; and  
means for displaying the sub-menu in response to a user selecting the sub-menu graphical component.

26. (Original) A computer program product stored on a computer operable medium for providing secondary functions from a menu item graphical control, said computer program product comprising:
- means for configuring a plurality of programmed functions using a configuration tool;
  - means for identifying a plurality of graphical components for each of the programmed functions;
  - means for modifying the menu item graphical control to include the graphical components corresponding to the configured programmed functions;
  - means for displaying the menu item graphical control with the included graphical components;
  - means for receiving a selection from a user corresponding to one of the graphical components; and
  - means for invoking the programmed function corresponding the selected graphical component.
